Luxury Suite and Isolation Room New Finish Requirements

DATE: 08/23/2018

Camp Bow Wow® Luxury Suite and Isolation Room New Finish Requirements

Finish Requirements:

All Camp Bow Wow® Luxury Suites and Isolation Rooms are required to have a white ceiling attached to the walls of the room. The ceiling can be hard cap made of gypsum board or constructed of acoustical ceiling tiles and metal grid. If hard cap the surface is required to be painted with **Sherwin Williams (Snowbird White)**, catalog #7004 in **Satin finish** to match the wall color and finish.

Effective April 25, 2018, the picture below shows the new finish materials approved for Camp Bow Wow® Luxury Suites and Isolation Rooms. The new finish materials are required for all new Camps, existing Camps pursuing relocation and Camps upgrading their Luxury Suites and Isolation Rooms.

Note: New Camps that started construction prior to April 25, 2018 have the option of installing the new floor and wall tile and Sherwin Williams Svelt Sage (Green) Satin finish paint on all walls above the wall tile and NO mural **OR** the previous finishes of Van Gogh Barnwood wood grain vinyl plank floor tile, FRP in almond color with pebble finish, TREX Select CDB base, and Sherwin Williams Svelt Sage (Green) Satin finish paint on all walls above the FRP; and one of the standard murals for Luxury Suites/Isolation Rooms from Murals Your Way by Cathy O'Brien.

Artwork Requirements:

Camp Bow Wow® Luxury Suites and Isolation Rooms to receive wall tiles are to have a **ceiling height of 9'0" A.F.F.** This ceiling height will allow for install of vinyl wall paper wrap that would be installed in full 52"-57" widths (between ceiling and wall tile) with ¼"-½" overlapping seams in each corner and for the 6"W x 36"L wall tile to be installed to a height of approx. 56¼" or no more than nine (9) 6" rows, thereby eliminating the need to trim the tiles into smaller widths.

All Camp Bow Wow® Luxury Suites and Isolations Rooms with new wall and floor tiles are required to install either the vinyl wall wrap noted above or one of the new wall art options of the **65"W x 45"H smart stick** (peel & stick) mural or the **HD Vinyl Texture mural** (requires wallpaper paste), shown below. It is important that the 65"W x 45"H mural be installed on a wall that is viewable by the Luxury Suite and Isolation Room ceiling mounted PB&J Webcam.

(Not actual size!)

Now that the new vinyl wall paper wrap and above mural have been designed and approved, all walls above the new wall tile are required to be painted with **Sherwin Williams (Snowbird White), catalog #7004 in Satin finish**. In the few cases where the new tile finishes are being used and approval to paint walls above tile with SW Svelt Sage (Green), catalog #6164 paint in Satin finish, the standard murals for Luxury Suites and Isolation Rooms are NOT required.

Grout Specifications:

Camp Bow Wow® requires the use of an industrial grade epoxy grout to ensure a durable and strong bond for installing the porcelain floor and wall tiles in what can be a very wet and highly acidic environment, with exposure to animal (wet & solid) feces and harsh cleaning chemicals. Camp Bow Wow® recommends using **CEG-IG Custom Industrial Grade epoxy grout** which is water cleanable and 100% solid epoxy grout that has high chemical, temperature and stain resistance. CEG-IG is a two-component epoxy system that combines a pigmented hardener with epoxy resins and recycled aggregates to create a durable and exceptionally strong bonding adhesive and grout joint filler that won't shrink or sag.

CEG-IG epoxy grout is to be **custom colored Dove Gray, catalog number 370** for use with the new porcelain floor tile, colored Midnight Blue, catalog number, ML65; and is to be **custom colored Graystone, catalog number 542** for use with the new porcelain wall tile, colored Gravel Road, catalog number SD16.

CEG-IG can be used as both a grout and thinset mortar and is NOT required to be used for both applications. CEG-IG epoxy grout in any color can be used as a thinset mortar for installing the porcelain floor and wall tiles, or any less expensive epoxy thinset may be used. The Camp Bow Wow® preferred supplier of the CEG-IG Custom Industrial Grade Epoxy Grout is Daltile.

The floor and wall tiles shall be installed using a **“Stretcher Bond” pattern** as shown above. Stretcher bond uses square or rectangular tiles that are laid like bricks in a wall. The end of each tile is lined up with the center of the tiles that are both directly above and below it. This creates a staggered, but cohesive look.
